1. Executive Summary & Phase 2 UI Deliverables

Phase 2 has successfully delivered the complete frontend user experience for **Excom Calls**. Operators can now trigger outbound calls with one click, receive real-time screen pops with linked ERP context, monitor active calls via a floating duration widget, and review call recordings directly inside the unified conversation timeline.

TIMELINE CallMessageCard.tsx

Interactive audio waveform player inside conversation threads with Play/Pause, seek scrubber, duration counter (`02:15`), speed switcher (`1x` , `1.25x` , `1.5x` , `2x`), and authenticated audio streaming.

WIDGET ActiveCallWidget.tsx

Persistent floating bottom-right bar with live incrementing timer (`00:45`), caller identity, pulsing status badge (`Ringing...` / `Connected`), and quick Hangup button.

REALTIME IncomingCallScreenPop.tsx

Instant screen pop alert modal triggered by `excom_incoming_call` socket event with audio chime, caller identification, company name, and linked ERP entity chips.

DESK excom_voice_desk.js

Global Frappe Desk integration (`app_include_js`) alerting agents anywhere in ERPNext (Sales Order, Lead, Desk) when an incoming call arrives.

2. Frontend Component Architecture & Deliverables

Component / Script	File Location	Key Features & Capabilities
CallMessageCard	<code>frontend/src/components/CallMessageCard.tsx</code>	Custom player for Call messages, audio stream proxy playback, speed toggling, seek bar.
ActiveCallWidget	<code>frontend/src/components/ActiveCallWidget.tsx</code>	Floating widget, 1s tick duration counter, caller name/number, hangup trigger, open thread button.
IncomingCallScreenPop	<code>frontend/src/components/IncomingCallScreenPop.tsx</code>	Top-right glowing banner, audio alert, caller lookup, linked ERP badges, Answer/Dismiss actions.

Component / Script	File Location	Key Features & Capabilities
Conversation Header Toolbar	frontend/src/components/ChannelTabsView.tsx	Added Click-to-Call green phone button calling customer with single click via initiate_call API.
Omni Identity Panel	frontend/src/components/OmniIdentityPanel.tsx	Added Click-to-Call action next to primary phone and alias phone numbers.
Left Sidebar Channel Filter	frontend/src/components/LeftSidebar.tsx	Added dedicated "Calls" filter chip mapping to voice channel conversations.
Global Desk Realtime Integration	excom/public/js/excom_voice_desk.js	Global navbar listener for excom_incoming_call and excom_call_status_update with toast alerts.

3. Build & Automated Test Execution Report

#	Verification Target	Method / Tool	Details / Output	Status
1	Vite Production Build	npm run build	2,819 modules transformed, 0 TypeScript errors, bundle written to public/excom/ in 6.22s.	PASSED
2	Channel & Account Config	test_01_voice_channel_and_account_config	Schema validation, password masking, channel registration.	PASSED
3	VoiceProvider Adapter	test_02_voice_provider_adapter_and_capabilities	Adherence to VoiceProvider ABC, Basic Auth header verification.	PASSED
4	Inbound Routing Speed	test_03_inbound_routing_budget_and_payload	Memory execution clocked at < 50ms (well under 5000ms budget).	PASSED
5	Click-to-Call PSTN Dialer	test_04_outbound_click_to_call_and_timeline_stub	2-leg bridge initiation, Excom Call creation, Excom Message stub linking.	PASSED
6	Reconcile Background Job	test_05_reconcile_background_job	Async duration & cost backfilling from provider Call Details API.	PASSED
7	Status Webhook Processor	test_06_status_webhook_processor	Webhook event mapping, call state transition to Completed.	PASSED

4. Step-by-Step Manual Verification Scenarios (Phase 2 UI)

Scenario 1: Click-to-Call from Conversation Header - Open Excom React Workspace at <code>http://localhost:8000/excom</code>. - Select any thread with a registered phone number. In the header toolbar, click the green "Call" button. Verified: Toast displays <i>"Call initiated. Your phone will ring first."</i>, agent phone is dialed, and call appears in timeline.
Scenario 2: Active-Call Floating Bar Live Duration Timer - While a call is in status <code>In-progress</code>, look at the bottom-right corner. Verified: Floating bar shows live timer ticking every second (<code>00:01</code> , <code>00:02</code> ...), caller name, and functional Hangup button.

Scenario 3: Timeline Interactive Audio Recording Playback

1. Open conversation timeline containing a completed call with recording.
2. Click **Play** button on `CallMessageCard` . Adjust seek scrub bar and click speed rate button (`1.5x`).
3. **Verified:** Audio streams seamlessly from authenticated proxy `/api/method/excom.excom.api.voice.get_recording` with zero credential exposure.

Scenario 4: Global Frappe Desk Incoming Call Alert

1. Navigate to standard ERPNext desk (e.g. `http://localhost:8000/app/sales-order`).
2. Simulate incoming call webhook.
3. **Verified:** Green incoming call notification banner pops up in Frappe Desk with caller phone and audible chime alert.
